

HEMANG CHAUHAN

Game Developer

◇ iagamedev07@gmail.com ◇ Portfolio ◇ YouTube ◇ itch.io

PROFILE

Unity developer with 7+ years of hands-on game development experience and 3+ years of commercial experience working remotely with an international team. Experienced across gameplay programming, production UI, multiplayer systems, VFX, debugging and optimization. Alongside professional work, I independently build and ship games and technical prototypes with strong C# background with experience spanning game architecture, rendering, shaders and content pipelines across Unity and Unreal engine.

EXPERIENCE

The Pyramid Watch — Unity Developer

Dec 2023 – Present

France · Remote

THE WATCH | Unity

- Contributed to THE WATCH from its Early Access release on the Epic Games Store (100K+ installs) through its current redesign and upcoming Steam release, on a project backed by Ubisoft and co-developed with Globant.
- Develop and maintain features across the commercial multiplayer Unity title, with primary ownership of UI alongside regular gameplay and systems programming.
- Contributed to core gameplay systems including units, weapon behaviours, state machines, projectile systems, attributes and progression.
- Implemented multiplayer gameplay behaviours within Photon Quantum's deterministic simulation and regularly integrated VFX with gameplay logic.
- Built major parts of the menu and in-game UI, including HUDs, health bars, card interfaces and gameplay flows.
- Continued development through its redesign into a deck- and grid-based strategy game, including card systems, grid-based unit placement and supporting gameplay/UI systems.
- Work across debugging, optimization, feature implementation and general production development within a small game-development team.

Freelance Game Developer

2023 – Present

- Build Unity games, prototypes and systems covering gameplay programming, UI, shaders, animation integration and technical prototyping.

Technical Graphic Designer Intern — IntellectPartners

Oct 2022 – Feb 2023

- Worked across motion graphics, UI, editing and visual content using After Effects, Photoshop, Illustrator and Premiere Pro.

SELECTED PROJECTS

Pixel Sandbox Survival | Unity · C# · Procedural Generation · Rendering · 2.5D

- Built an endless procedural world with runtime-generated sprite terrain, chunking, bitmasking and multiple terrain height levels.
- Moved terrain generation to async to reduce main-thread stalls, and added traversal between generated elevations.
- Created traversal across generated elevations plus custom depth, occlusion and sprite-sorting systems that make the 2D world behave visually like a layered 3D environment.

Dhaba Simulator | Unity · C# · Netcode for GameObjects

- Co-op first-person cooking and management game with networked player movement and synchronization.
- Built the initial multiplayer loop (currently expanding) on reusable interaction, simulation systems alongside a modular character system with facial rigging, expression presets and Unity editor tools for configuring these.

Lattice | Unity · C# · Runtime Geometry · Released on itch.io

- Built and released a sandbox modelling game where players create 3D geometry at runtime by placing points and forming triangles/quads
- Independently handled gameplay, UI, visuals, sound design and original music.

Additional Shipped Unity Games:

- **Star Ballz** — First Unity title, released on Google Play in 2018 with Ads Monetization, Play Games Service integration.
- **Stick.EXE** — UI-driven narrative game built around a functional desktop/OS recreation.
- **Larry's Prophecy** — Complete 2D action platformer with enemies and damage/heal/AoE spell systems.
- **Additional Projects** — Developed smaller games and prototypes involving puzzle mechanics, abilities, interaction systems, time manipulation etc.

UNREAL ENGINE

C++ | Blueprints | Multiplayer | Gameplay Programming | Environment Art

- Built gameplay and movement prototypes including a replicated C++ traversal system with multiplayer support,
- Authored Custom animations in Cascadeur and continue developing reusable traversal/locomotion systems.
- Additional environment work includes landscape shaders, vertex painting, spline-driven placement and procedural environmental effects.

TECHNICAL SKILLS

Programming & Engines: Unity | C# | Unreal Engine | C++ | Blueprints | Git

Development & Tools: Git | Unity NGO | Photon Quantum | FMOD Studio | Editor Tooling | Debugging | Profiling | Optimization | Visual Studio | MCP Graphics: Shader Graph | HLSL | VFX | 2D/3D Rendering | Procedural Generation | Runtime Geometry

3D & Animation: Blender | Cascadeur | 3D Modelling | Character Animation | Environment Art | Rigging | Facial Rigging | Modular Characters

Creative: Photoshop | Illustrator | After Effects | Premiere Pro | DaVinci Resolve | Figma | Sound Design | FL Studio

EDUCATION

B.Tech in Computer Science — Manav Rachna University

2019 – 2023

SGPA: 8.78 / 10
